In the first line, we are using multiple assignments in one line. So, after the first line of execution, $x = a$, $y = b$ and $z = c$, in the second line, we know that $=$ operator has the right to left associativity. So, the value of z which is c will be assigned to y and the value of y which is now c will be assigned to x. So finally, all variables will contain the same value c. Hence (a) and (d) are correct. **Post**
